Subject: Urgent request for remedial measures to manage storm water at Radhanesda Solar Parks

Dear Sir,

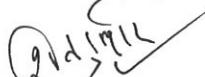

It has come to our notice that large parts of northern Gujarat, including the Radhanesda-I Solar Park, have been inundated following the unprecedented rainfall over the past week. We also understand that, to mitigate flooding, storm water is being discharged from Radhanesda-I into the proposed Radhanesda-II Solar Park through the sluice gates in the embankment on the southern side of the existing park.

While this may provide temporary relief at Radhanesda-I, the accumulation of water in Radhanesda-II is likely to delay site readiness significantly. As SECI is in the process of finalizing the tenders for the EPC contract to establish the planned 700 MW solar PV project in Radhanesda-II, such delays could adversely affect the project schedule.

In view of the above, we request GPCL to kindly apprise us of the remedial measures being undertaken or planned to channelize the storm water effectively to safeguard both the solar parks and minimize any disruption to the timelines of the 700 MW SPV project in Radhanesda-II.

An early response and necessary action in this matter will be greatly appreciated.

Yours sincerely,

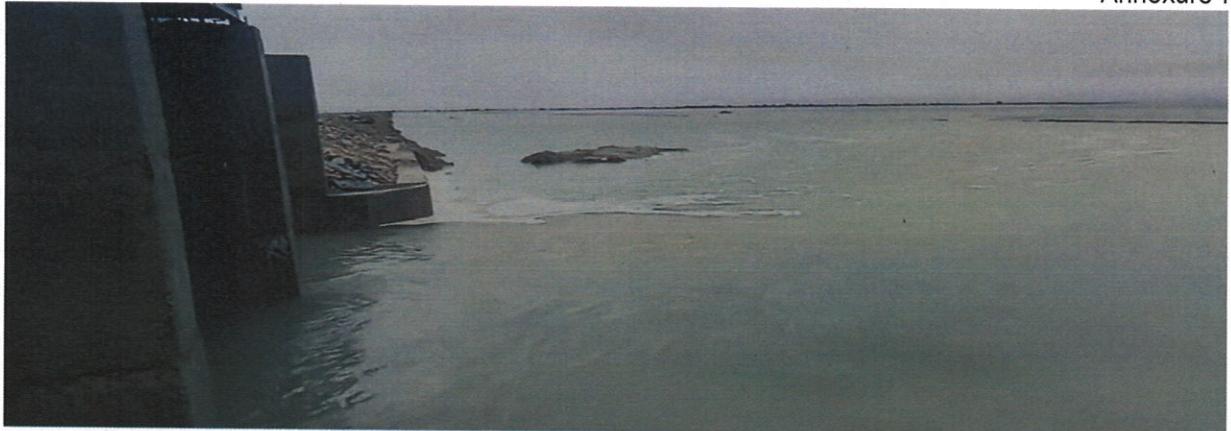

(Sivakumar V. Vepakomma)
Director (PS)
